CSCE 740 - Requirements Testing Activity
Name(s):

Consider related requirements for a patient management system:

- If a patient is known to be allergic to any particular medication, then prescription of that medication shall result in a warning message being issued to the system user.
- If a prescriber chooses to ignore an allergy warning, they shall provide a reason why this has been ignored.

Develop 3-5 test cases for these requirements. Try to come up with input, expected output, and the test procedure for each. The input and output do not need to be detailed ("a patient record" is fine, you do not need to include the details that appear on the record).
